

# ENVIRONMENTAL AND SOCIAL RESPONSIBILITY POLICY

## Our Responsibility

Clayton Hotel Manchester Airport as part of Dalata Hotel Group, is committed to ethical behaviour in business and to taking responsibility for the impact of the hotel on society and the environment.

### Environment, Energy Management & Emissions

Clayton Hotel Manchester Airport recognises the importance of managing and reducing our energy and Greenhouse Gas emissions across our business. To this end we have an active program of measurement and reporting our performance in these areas across all our properties. We report on our Climate Change strategy and performance to the global best-practice environmental reporting framework, CDP.

### Water

Water is a critical resource, and Clayton Hotel Manchester Airport recognises our responsibility to engage in conservation projects; we have implemented these across the property. Glass bottles are used in all our meeting rooms, bars and restaurants to reduce our plastic and water usage.

### Waste

Removing single use plastics from all aspects of our business is the primary waste reduction goal of Clayton Hotel Manchester Airport. Efforts already made include the elimination of plastic straws from use in all outlets, and replacing them with paper, compostable versions. We use specialist food waste companies to manage our waste produce in order to minimise the negative environmental impact we have.
